# Chapter 1

## Hierarchical Index

### 1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Deque . . . . .	8
deque_base . . . . .	9
deque< val_type > . . . . .	7
deque_iterator< val_type, ref, ptr > . . . . .	10
deque_iterator< val_type, val_type &, val_type * > . . . . .	10
Node . . . . .	14
node< val_type > . . . . .	15

## Chapter 2

# Class Index

### 2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">deque&lt; val_type &gt;</a> . . . . .	7
<a href="#">Deque</a>	
Class implementation of iterator of deque . . . . .	8
<a href="#">deque_base</a>	
<a href="#">Deque</a> . . . . .	9
<a href="#">deque_iterator&lt; val_type, ref, ptr &gt;</a>	
Class implementation of iterator of deque . . . . .	10
<a href="#">Node</a>	
Class of the element of deque . . . . .	14
<a href="#">node&lt; val_type &gt;</a> . . . . .	15

## Chapter 3

# File Index

### 3.1 File List

Here is a list of all documented files with brief descriptions:

<a href="#">deque.h</a>	Implementation of the deque, supporting iterators Created by couatl on 09.04.16 . . . . .	17
-------------------------	---	----

## Chapter 4

# Class Documentation

### 4.1 deque< val\_type > Class Template Reference

Inheritance diagram for deque< val\_type >:

#### Public Types

- typedef `node`< val\_type > **Node**
- typedef `deque_iterator`< val\_type, val\_type &, val\_type \* > **iterator**
- typedef `deque_iterator`< val\_type, const val\_type &, const val\_type \* > **const\_iterator**

#### Public Member Functions

- **deque** (size\_t n)
- `deque` (size\_t n, const val\_type &var)  
*Fill Constructor.*
- `deque` (`deque` &&move)  
*Move Constructor.*
- `deque` (const `deque` &Obj)  
*Copy Constructor.*
- `iterator` **begin** ()
- `const_iterator` **begin** () const
- `iterator` **end** ()
- `const_iterator` **end** () const
- `const_iterator` **cend** () const
- `const_iterator` **cbegin** () const
- `deque` & **operator=** (const `deque` &Obj)
- `deque` & **operator=** (`deque` &&x)
- size\_t **size** () const

- void **resize** (size\_t n)
- bool **empty** ()
- val\_type & **at** (size\_t n)
- const val\_type & **at** (size\_t n) const
- val\_type & **front** ()
- const val\_type & **front** () const
- val\_type & **back** ()
- const val\_type & **back** () const
- void **push\_front** (const val\_type &val)
- void **push\_back** (const val\_type &val)
- void **pop\_back** ()
- void **pop\_front** ()
- void **clear** ()
- void **assign** (size\_t n, const val\_type &val)
- [iterator](#) **insert** ([const\\_iterator](#) position, const val\_type &val)
- template<class InputIterator >  
[iterator](#) **insert** ([const\\_iterator](#) position, InputIterator first, InputIterator last)
- val\_type & **operator[]** (size\_t n)
- const val\_type & **operator[]** (size\_t n) const
- void **swap** ([deque](#) &b)
- [iterator](#) **erase** ([const\\_iterator](#) position)
- [iterator](#) **erase** ([const\\_iterator](#) first, [const\\_iterator](#) last)

### Static Public Member Functions

- static size\_t **max\_size** ()

### Static Public Attributes

- static size\_t **\_maxsize** = 100

### Additional Inherited Members

The documentation for this class was generated from the following file:

- [deque.h](#)

## 4.2 Deque Class Reference

Class implementation of iterator of deque.

```
#include <deque.h>
```

### 4.2.1 Detailed Description

Class implementation of iterator of deque.

Author

couatl

Version

1.0

Date

25/11/2016

Big Boss of this project

The documentation for this class was generated from the following file:

- [deque.h](#)

## 4.3 deque\_base Class Reference

[Deque](#).

```
#include <deque.h>
```

Inheritance diagram for deque\_base:

### Public Attributes

- `size_t _buff_size`

### 4.3.1 Detailed Description

[Deque](#).

Author

couatl

Version

1.0.1

Date

25/11/2016

The documentation for this class was generated from the following file:

- [deque.h](#)

## 4.4 deque\_iterator< val\_type, ref, ptr > Class Template Reference

Class implementation of iterator of deque.

```
#include <deque.h>
```

### Public Types

- typedef `node`< val\_type > **Node**
- typedef `deque_iterator`< val\_type, val\_type &, val\_type \* > **iterator**
- typedef `deque_iterator`< val\_type, const val\_type &, const val\_type \* > **const\_iterator**
- typedef `deque_base` **\_deque**

### Public Member Functions

- `deque_iterator` (Node \*base)  
*Constructs a deque from one base node.*
- `deque_iterator` (Node \*cur, Node \*first, \_deque \*base)  
*Constructor for initialazing a deque with begin but not with an end.*
- `deque_iterator` (Node \*cur=nullptr, Node \*first=nullptr, Node \*last=nullptr, \_deque \*base=nullptr)  
*Default constructor.*
- `deque_iterator` (const iterator &T)  
*Copy constructor.*
- val\_type & `operator*` () const  
*Dereference operator.*
- `deque_iterator` & `operator++` ()  
*Operator ++.*
- `deque_iterator` `operator+` (ptrdiff\_t n) const  
*Operator +.*
- `deque_iterator` `operator++` (int)  
*Reverse operator +.*
- `deque_iterator` & `operator+=` (ptrdiff\_t n)  
*Operator +=.*
- `deque_iterator` & `operator--` ()  
*Prefix operator --.*
- `deque_iterator` & `operator--` (int)  
*Postfix operator --.*
- `deque_iterator` & `operator-` (ptrdiff\_t n) const  
*Operator -.*
- `deque_iterator` & `operator-=` (ptrdiff\_t n)  
*Operator -=.*
- val\_type \* `operator->` () const  
*Operator access.*
- val\_type & `operator[]` (ptrdiff\_t n) const
- `deque_iterator` & `operator=` (const iterator &copy)

## Public Attributes

- `Node * _cur`
- `Node * _first`
- `Node * _last`
- `_deque * _base`

### 4.4.1 Detailed Description

```
template<class val_type, class ref, class ptr>
class deque_iterator< val_type, ref, ptr >
```

Class implementation of iterator of deque.

#### Author

couatl

#### Version

1.0

#### Date

25/11/2016

Implemented as Random Access Iterator

### 4.4.2 Constructor & Destructor Documentation

#### 4.4.2.1 deque\_iterator()

```
template<class val_type, class ref, class ptr>
deque_iterator< val_type, ref, ptr >::deque_iterator (
    const iterator & T ) [inline]
```

Copy constructor.

So basic copy constructor

#### Parameters

in	<i>T</i>	Object to copy
----	----------	----------------

### 4.4.3 Member Function Documentation

**4.4.3.1 operator\*()**

```
template<class val_type, class ref, class ptr>
val_type& deque_iterator< val_type, ref, ptr >::operator* ( ) const [inline]
```

Dereference operator.

**Returns**

Value of current node Dereferencing of \_cur element of this class

**4.4.3.2 operator+()**

```
template<class val_type, class ref, class ptr>
deque_iterator deque_iterator< val_type, ref, ptr >::operator+ (
    ptrdiff_t n ) const [inline]
```

Operator +.

**Returns**

Copy of the next iterator

**Parameters**

in	<i>n</i>	Number to offset your current iterator Implemented based on prefixed ++. Need to Random Access Iterator
----	----------	---

**4.4.3.3 operator++() [1/2]**

```
template<class val_type, class ref, class ptr>
deque_iterator& deque_iterator< val_type, ref, ptr >::operator++ ( ) [inline]
```

Operator ++.

**Returns**

Object of the next iterator Creates an element if it doesn't exist for now

**4.4.3.4 operator++() [2/2]**

```
template<class val_type, class ref, class ptr>
deque_iterator deque_iterator< val_type, ref, ptr >::operator++ (
    int ) [inline]
```

Reverse operator +.

**Returns**

Copy of the offset iterator

## Parameters

in	<i>n</i>	Number to offset your current iterator Implemented based on prefixed ++. Need to Random Access Iterator
----	----------	---

## 4.4.3.5 operator+=()

```
template<class val_type, class ref, class ptr>
deque_iterator& deque_iterator< val_type, ref, ptr >::operator+= (
    ptrdiff_t n ) [inline]
```

Operator +=.

## Returns

Offset iterator

## Parameters

in	<i>n</i>	Number to offset your current iterator Implemented based on operator +
----	----------	--

## 4.4.3.6 operator-()

```
template<class val_type, class ref, class ptr>
deque_iterator& deque_iterator< val_type, ref, ptr >::operator- (
    ptrdiff_t n ) const [inline]
```

Operator -.

## Returns

Object of the offset iterator Based on prefixed operator –

## 4.4.3.7 operator--() [1/2]

```
template<class val_type, class ref, class ptr>
deque_iterator& deque_iterator< val_type, ref, ptr >::operator-- ( ) [inline]
```

Prefixed operator –.

## Returns

Object of the previous iterator Creates an element if it doesn't exist for now, even if you're outrange (so-so)

**4.4.3.8 operator--()** [2/2]

```
template<class val_type, class ref, class ptr>
deque_iterator& deque_iterator< val_type, ref, ptr >::operator-- (
    int ) [inline]
```

Postfixed operator --.

**Returns**

Object of the previous iterator Based on prefixed operator --

**4.4.3.9 operator-=()**

```
template<class val_type, class ref, class ptr>
deque_iterator& deque_iterator< val_type, ref, ptr >::operator-= (
    ptrdiff_t n ) [inline]
```

Operator -=.

**Returns**

Offset iterator

**Parameters**

in	<i>n</i>	Number to offset your current iterator Implemented based on operator -
----	----------	--

**4.4.3.10 operator->()**

```
template<class val_type, class ref, class ptr>
val_type* deque_iterator< val_type, ref, ptr >::operator-> ( ) const [inline]
```

Operator access.

**Returns**

Pointer to value in the current iterator Returning pointer to the value storing in the current iterator

The documentation for this class was generated from the following file:

- [deque.h](#)

**4.5 Node Class Reference**

Class of the element of deque.

```
#include <deque.h>
```

### 4.5.1 Detailed Description

Class of the element of deque.

Author

couatl

Version

1.0

Date

25/11/2016

So ordinar node of ordinar deque

The documentation for this class was generated from the following file:

- [deque.h](#)

## 4.6 node< val\_type > Struct Template Reference

### Public Types

- typedef [deque\\_base](#) **\_deque**

### Public Member Functions

- [node](#) (val\_type value=0, [node](#) \*next=nullptr, [node](#) \*prev=nullptr, [\\_deque](#) \*base=nullptr)  
*Default constructor.*
- [~node](#) ()  
*Destructor.*

### Public Attributes

- val\_type **\_value**
- [node](#) \* **\_next**
- [node](#) \* **\_prev**
- [\\_deque](#) \* **\_base**

The documentation for this struct was generated from the following file:

- [deque.h](#)

## Chapter 5

# File Documentation

### 5.1 deque.h File Reference

Implementation of the deque, supporting iterators Created by couatl on 09.04.16.

```
#include <cstddef>
#include <iostream>
```

#### Classes

- class `deque_base`  
*Deque.*
- struct `node< val_type >`
- class `deque_iterator< val_type, ref, ptr >`  
*Class implementation of iterator of deque.*
- class `deque< val_type >`

#### Functions

- `template<class val_type >`  
`bool operator== (const deque_iterator< val_type, val_type &, val_type *> &it1, const deque_iterator< val_type, val_type &, val_type *> &it2)`
- `template<class val_type >`  
`bool operator!= (const deque_iterator< val_type, val_type &, val_type *> &it1, const deque_iterator< val_type, val_type &, val_type *> &it2)`
- `template<class val_type >`  
`bool operator< (const deque_iterator< val_type, val_type &, val_type *> &it1, const deque_iterator< val_type, val_type &, val_type *> &it2)`
- `template<class val_type >`  
`bool operator> (const deque_iterator< val_type, val_type &, val_type *> &it1, const deque_iterator< val_type, val_type &, val_type *> &it2)`
- `template<class val_type >`  
`bool operator<= (const deque_iterator< val_type, val_type &, val_type *> &it1, const deque_iterator< val_type, val_type &, val_type *> &it2)`

- `template<class val_type >`  
`bool operator>= (const deque_iterator< val_type, val_type &, val_type *> &it1, const deque_iterator<`  
`val_type, val_type &, val_type *> &it2)`
- `template<class val_type >`  
`ptrdiff_t operator- (const deque_iterator< val_type, val_type &, val_type *> it1, const deque_iterator< val_`  
`_type, val_type &, val_type *> it2)`
- `template<class val_type >`  
`deque_iterator< val_type, val_type &, val_type * > operator+ (ptrdiff_t n, deque_iterator< val_type, val_type`  
`&, val_type *> it)`

### 5.1.1 Detailed Description

Implementation of the deque, supporting iterators Created by couatl on 09.04.16.
